

CALL FOR PAPERS

6th International Workshop on Biological Knowledge Discovery and Data Mining (BIOKDD'15)

Held in parallel with

26th International Conference on Database and Expert Systems Applications (DEXA'15)

www.dexa.org/biokdd2015

Valencia, Spain

September 1-4, 2015

With the development of Molecular Biology during the last decades, we are witnessing an exponential growth of both the volume and the complexity of biological data. For example, the *Human Genome Project* provided the sequence of the 3 billion DNA bases that constitute the human genome. And, consequently, we are provided too with the sequences of about 100,000 proteins. Therefore, we are entering the post-genomic era: after having focused so many efforts on the accumulation of data, we have now to focus as much effort, and even more, on the analysis of these data. Analyzing this huge volume of data is a challenging task because, not only, of its complexity and its multiple and numerous correlated factors, but also, because of the continuous evolution of our understanding of the biological mechanisms. Classical approaches of biological data analysis are no longer efficient and produce only a very limited amount of information, compared to the numerous and complex biological mechanisms under study. From here comes the necessity to use computer tools and develop new *in silico* high performance approaches to support us in the analysis of biological data and, hence, to help us in our understanding of the correlations that exist between, on one hand, structures and functional patterns of biological sequences and, on the other hand, genetic and biochemical mechanisms. *Knowledge Discovery and Data Mining* (KDD) are a response to these new trends.

Topics of BIOKDD workshop include, but not limited to:

Data Preprocessing: Biological Data Storage, Representation and Management (data warehouses, databases, sequences, trees, graphs, biological networks and pathways, ...), Biological Data *Cleaning* (errors removal, redundant data removal, completion of missing data, ...), *Feature* Extraction (motifs, subgraphs, ...), *Feature* Selection (filter approaches, wrapper approaches, hybrid approaches, embedded approaches, ...)

Data Mining: Biological Data Regression (regression of biological sequences...), Biological data clustering/biclustering (microarray data biclustering, clustering/biclustering of biological sequences, ...), Biological Data Classification (classification of biological sequences...), Association Rules Learning from Biological Data, Text mining and Application to Biological Sequences, Web mining and Application to Biological Data, Parallel, Cloud and Grid Computing for Biological Data Mining

Data Postprocessing: Biological Nuggets of Knowledge Filtering, Biological Nuggets of Knowledge Representation and Visualization, Biological Nuggets of Knowledge Evaluation (calculation of the classification error rate, evaluation of the association rules *via* numerical indicators, e.g. *measurements of interest*, ...), Biological Nuggets of Knowledge Integration

PAPER SUBMISSION DETAILS:

Authors are invited to submit electronically original contributions in English. Submitted papers should not exceed 5 pages in IEEE format <http://www.computer.org/portal/web/cscps/formatting>. All

accepted papers will be published in the proceedings of DEXA'15 Workshops with IEEE CSP. One of the authors of an accepted paper must register to DEXA'15 conference and present the paper at BIOKDD'15 workshop. For paper registration and electronic submission see <http://confdriver.ifs.tuwien.ac.at/dexa2015/> starting from January 2015.

The winner paper of the Best Paper Award in BIOKDD-DEXA'15 workshop will be published for free by BioData Mining <www.biodatamining.org>.

IMPORTANT DATES: Submission of abstracts: April 7, 2015
 Submission of full papers: April 10, 2015
 Notification of acceptance: May 10, 2015
 Camera-ready copies due: May 31, 2015

PROGRAM COMMITTEE (in alphabetical order):

Mourad Elloumi, LaTICE, University of Tunis, Tunisia (PC Chair)
 Haider Banka, Indian School of Mines, Dhanbad, India
 Jérémie Bourdon, University of Nantes, France
 Tolga Can, Middle East Technical University, Ankara, Turkey
 Virginio Cantoni, University of Pavia, Pavia, Italy
 Matteo Comin, University of Padova, Padova, Italy
 Bhaskar DasGupta, University of Illinois at Chicago, Chicago, USA
 Sebastian Dorok, Otto-von-Guericke-University, Magdeburg, Germany
 Giovanni Felici, IASI, National Research Council of Italy, Rome, Italy
 Adrien Goëffon, University of Angers, France
 Yann Guermeur, LORIA-CNRS, Vandoeuvre-lès-Nancy, France
 Robert Harrison, Georgia State University, Atlanta, Georgia, USA
 Daisuke Kihara, Purdue University, West Lafayette, USA
 Gaurav Kumar, Virginia Commonwealth University, Richmond, USA
 Dominique Lavenier, GenScale, IRISA-CNRS, Rennes, France
 Ahmed Moussa, University Abdelmalek Essaadi, Tangier, Morocco
 Mohamed Nadif, University Paris-Descartes, Paris, France
 Hasan Ogul, Baskent University, Ankara, Turkey
 Tiratha Raj Singh, Jaypee University of Information and Technology, Solan, Himachal Pradesh, India
 Mohamed-Ramzi Temanni, Sidra Medical and Research Center, Doha, Qatar
 Davide Verzotto, Genome Institute of Singapore, Singapore
 Emanuel Weitschek, Roma Tre University, Rome, Italy
